New logical checks in OneGate (for 2016 payments data collection)

As mentioned in infofiche 32 of June 2016, the OneGate reporting tool to be used for the data collection of the 2016 payments data will be updated with a few additional logical checks.

Two additional checks will be added into OneGate. The list of checks is:

New Check 1: (Table 5) - Number of offices
Fields: 5001900, 5002300, 5002700 and 5003100
One of these fields must be filled

Reasoning: each reporting agent should have at least one office/place of business

New Check 2: (Table 6) – Total number of cards
6001600 must be equal or greater than 6001000 + 6000200 + 6000300

Reasoning: logical check : the total always has to be greater than the subcategories
